ELAV-like neuronal protein 1, truncated splice form - human
NyAlternate names: Drosophila BLAV(embryonic lethal, abnormal vision)-like 4; Hu antigen
C;Species: Homo sapiens (man)
C;Date: 18-Aug-2000 #sequence_revision 18-Aug-2000 #text_change 09-Jul-2004
C;Accession: 152708
R;Sekido, Y.; Bader, S.A.; Carbone, D.P.; Johnson, B.E.; Minna, J.D.
Cancer Res. 54, 4988-4922, 1994
A;Title: Molecular analysis of the Hub gene encoding a paraneoplastic encephalomyelitis
A;Reference number: 152708; MUID:94349312; PMID:8069866
A;Accession: 152708
A;Accession: 152708
A;Accession: 152708
A;Status: translated from GB/EMBL/DDBJ
A;Molecule type: mRNA
A;Residues: 1-11 <a href="mailto:sbk">sbk</a>
A;Cross-references: UNIPROT:Q16234; GB:S73887; NID:9688242; PIDN:AAD14142.1; PID:9426184
C;Comment: This abnormal peptide is expressed. For the long splice form, see PIR:138726.
C;Gonment: This abnormal peptide is expressed. For the long splice form, see PIR:138726.

### ALIGNMENTS

```
This sequence represents a cyclophilin B peptide of the invention. The peptides are tumour antigen peptides derived from cyclophilin B, that recognise cytotoxic T-cells (CTL) which bind to the HLA antigen. The peptides are used for the treatment and diagnosis of tumours
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                capable of expressing the interferons and/or antigenic proteins (AP), antigenic peptides derived from the proteins or DNAs capable of expressing the antigenic proteins or peptides, in the manufacture of an agent for induction of antigen-specific T cells. The products of the invention have virucide and cytostatic activity and can be used for gene therapy or as inducers of antigen-specific T cells. The action of interferon-alpha (IFN-alpha) in a system for inducing specific cytotoxic T cell (CTL) by administering an antigenic peptide in an incomplete Freund's adjuvant (IFA) emulsion preparation form was evaluated. IFNS (or inducing antigen-specific T cells in an individual who has been administered with AP (or DNA encoding AP) or vice versa. The medicament is useful for the treatment or prophylaxis of a tumor or a viral
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Use of antigenic proteins, peptides, interferon or their encoding DNA, in the manufacture of an agent for the induction of antigen-specific T
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This invention describes the novel use of interferons (IFNs) or DNAs

The desensitizers or allergic reaction suppressors are useful for treating and preventing type I allergic diseases and in cancer vaccines for preventing or treating cancer. The allergic reaction suppressors are also useful for suppressing an allergic reaction or reducing immunoglobulin E antibody production, and for desensitization to antigens. This sequence represents a peptide used in the invention and corresponds to amino acids 91-99 of the cyclophilin B protein with the phe at position 92 replaced by a Tyr.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This invention describes the novel use of interferons (IFNs) or DNAs capable of expressing the interferons and/or antigenic proteins (AP), antigenic peptides derived from the proteins or DNAs capable of expressing the antigenic proteins or peptides, in the manufacture of an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Use of antigenic proteins, peptides, interferon or their encoding DNA, the manufacture of an agent for the induction of antigen-specific T
                                                                                                                                                 This sequence represents a cyclophilin B peptide of the invention. The peptides are tumour antigen peptides derived from cyclophilin B, that recognise cytotoxic T-cells (CTL) which bind to the HLA antigen. The peptides are used for the treatment and diagnosis of tumours

The present invention describes peptides recognising cancer cells with tumour specific cytotoxic T lymphocytes (CTD). The peptides recognising cancer cells with tumour specific CTLs are selected from: (1) peptides of sequences (AAG68066 to AAG68069); (2) peptides containing the above mentioned sequences; (3) peptides having 70 % or more of homogeneity with the above mentioned sequences; and (4) peptides with one or more deleted, substituted, added or inserted amino acid(s) of the above mentioned sequences, particularly those having recognising property due to HLA-A2402 binding CTL, especially having at least 5 amino acids, used for medicine, particularly anticancer agents, derived from antitumour antigenic peptides of lck, src family, SART-1, SART-3 or cyclophilin B genes. The antitumour peptides have cytostatic activities. The peptides are used for the treatment of cancer. The peptides cause activation of the contained from the c
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ó
agent for induction of antigen-specific T cells. The products of the invention have virucide and cytostatic activity and can be used for gene therapy or as inducers of antigen-specific T cells. The action of interferon-alpha (IFN-alpha) in a system for inducing specific cytotoxic T cell (CTL) by administering an antigenic peptide in an incomplete Freund's adjuvant (IFA) emulsion preparation form was evaluated. IFNs (or DNA encoding IFNs) are useful in the manufacture of a medicament for inducing antigen-specific T cells in an individual who has been administered with AP (or DNA encoding AP) or vice versa. The medicament is useful for the treatment or prophylaxis of a tumor or a viral
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New peptides for recognizing cancer cells with tumor specific cytotoxic Tlymphocytes and for treating cancer.

The invention relates to a composition (I) comprising an immune effector cell and a cell penetrating peptide (CPP) associated with an antigen or antibody. Also included are (1) a vaccine comprising (I), CPP associated with an antigen, and apharmaceutically acceptable carrier and (2) preparing a composition for a disease, by providing (I) and CPP associated with an antigen for disease, and introducing the antigen associated CPP to (I), where antigen enters into the cell. The antigens care, for example, tumour antigen derived epitopes recognised by tumour infiltrating lymphocytes (TIL) of Him human leukocyte antigen) class I or II. The composition is useful for enhancing immunity in an animal to a disease, by administering a mature dendritic cell comprising CPP congrises both CD4+ and CD8+ T cells. It is also useful for treating a sociated with an antigen to disease, to the animal, such that following cancer, non-Hodgkin's lymphoma, lymphoma, uterine cancer, non-Hodgkin's lymphoma, leukaemia, lymphoma, uterine cancer, non-Hodgkin's lymphoma, uterine cancer, prostate cancer, kidney cancer, adenocarcinoma, breast cancer, prostate cancer, vorarian cancer and pancreatic cancer). The animal is further subjected to a cancer treatment including surgery, breast cancer, prostate cancer, vorarian cancer and pancreatic cancer). The animal is further subjected to a cancer treatment including surgery, cradiation, chemotherapy or gene therapy. The administration of (I), preferably dendritic cell is prior to, subsequent to or concurrent with, the cancer treatment. The present sequence is a tumour antigen derived ceptived epitope for inclusion in the composition of the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to a method for the detection of antigen specific T-cells in a blood sample involving the use of a plurality of antigenic peptides. The method comprises sampling of peripheral blood monocytes; stimulation of the collected peripheral blood monocytes with antigens without direct use of antigen presenting cells; and detection of T-cells specific to the antigen in the stimulated monocytes. The method is particularly used for the detection of cancer as it can be used in semi-duantitative determination of cancer specific T-cells. It can also be used for cancer vaccine therapy for patients with cervical or prostate cancer. The method can additionally be used to monitor of cellular immunity and cancer immune therapy by detection of specific T-cell frequencies. Sequences ABR84367-ABR84380 represent HLA-A24 (human leukocyte antigen) peptides of human origin used in an example from the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ð
                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to allergic reaction suppressors, comprising a peptide which originates from the same antigenic substance as the antigenic substance inducing the (peptide-originated) allergic reaction, and containing an epitope different from the epitope participating in the induction of the allergic reaction and yet dos not induce the allergic reaction. The desensitizers or allergic reaction suppressors are useful for treating and preventing type I allergic diseases and in cancer vaccines for preventing or treating cancer. The allergic reaction or suppressors are also useful for suppressing an allergic reaction or reducing immunoglobulin E antibody production, and for desensitization to antigens. This sequence represents a peptide used in the invention and corresponds to amino acids 91-99 of the cyclophilin B protein.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention comprises a method for identifying a cell that will differentiate into a metastatic cancer cell, the method involves identifying a mutated fibronectin in the cell. The method of the invention is useful for preventing metastatic cancer. The present a acid sequence represents a Class I HLA-restricted widely expressed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Tumor antigen peptides derived from cyclophilin B for treatment and diagnosis of tumors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    .,

The peptides are tumour antigen peptides derived from cyclophilin B, that recognise cytotoxic T-cells (CTL) which bind to the HLA antigen. The peptides are used for the treatment and diagnosis of tumours

The peptides are tumour antigen peptides derived from cyclophilin B, that recognise cytotoxic T-cells (CTL) which bind to the HLA antigen. The peptides are used for the treatment and diagnosis of tumours
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps

The sequences given in AAR91897-98 represent the N-terminal peptides from the major and minor components, KGF-a and KGF-b, of recombinantly capressed keratinocyte growth factor (KGF). Interestingly the N-terminal fragment of KGF-b indicates that it is an N-terminally truncated form of KGF which is proteolytically cleaved at the Arg23-Ser24 peptide bond. KGF may be used in the construction of KGF analogues (see also AAR91865-96).

These analogues have up to the first 24 N-terminal amino acids modified so that Cys1 and Cys15 are deleted or substituted. Deleting or substituting the Cys residues at positions 1 and 15 of native KGF substituting the Cys residues at bositions 1 and 15 of native KGF produces a KGF analogue which has substantially improved stability. These Expensions of native KGF analogues for the detection of non-fibroblast epithelium agents and in the generation of antibodies for the detection or purification of native KGF. The KGF analogues may be applied to tissues with damage to, or insufficient numbers of, non-fibroblast epithelium cells. This includes the stimulation, proliferation and differentiation of adnexal structures, e.g. hair follicles, sweat glands, and sebaceous glands in burns patients, treating gastric and duodenal ulcers, and increasing liver function to treat or prevent e.g. hepatic cirrhosis
                                                                                                                                                                                                                                                           Keratinocyte growth factor analogues with modified N-terminal region stimulate prodn. of non-fibroblast epithelial cells and are useful e.g. to treat gastric and duodenal ulcers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Preparation; high; purity; yield; chemical analysis; esterase; determination; phospholipid.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Score 27.5; DB 2; Length 12; Pred. DNA fragment for choline oxidase prepn., for high purity and high yield comprises gene coding choline oxidase prepd. by culturing microbe transformed by recombinant plasmid for choline chemical analysis and
                                                                                                                                                                                                          The sequence is that of the N-terminal of choline oxidase. Choline oxidase is useful for chemical analysis of choline, determination of choline esterase contained in serum and determination of phospholipid. (Updated on 16-OCT-2003 to standardise OS field)

Patent No. US20020161188A1
GENERAL INFORMATION:
APPLICANT: Jackowski, George
TITLE OF INVENTION: Biopolymer Marker Indicative of Disease State Having a Molecular V
TITLE OF INVENTION: of 1020 Daltons
FILE REFERENCE: 2132.025
CURRENT APPLICATION NUMBER: US/09/846,350
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                    0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
